grounding
the energies of the commons

We are in a quest to find meaningful and enduring ways to relate with each other and our environment, in order to build a holistic energy transition for living in future communities of wellbeing here in Rjukan. You, the people, will soon encounter different personalized postcards specially made for you. We hope you see them as an invitation to have a make-a-wish moment with yourself and your fellow citizens. To visualize and manifest together a better version of the future. That unique and creative version that each one of us has somewhere in our minds and hearts about the new force of life we wish to manifest together, **NOW**.
